

## **Play detector 200 Series**

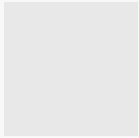

SKU: Play detector

---

## **DESCRIPTION**

The equipment generates an alternate stress on the wheels and, therefore, on the organs of the steering wheel and suspensions, allowing a visual check of any defects (clearance of the spherical couplings, silent block, damper attachment, etc.).

- Electrohydraulic operation
- Plate with indented surface to prevent plate-wheel sliding
- Possibility of floor, recessed or pit installation
- For cars and light commercial vehicles - Includes new models in conformity with EU Directive 2014/45
- For commercial vehicles and cars - Hydraulic pipes between console and plates are not included and must be added upon installation
  
- Main switch on console
- Operation buttons on lighting
- Low tension
- Plate drive controls on torch with 5500 mm cable
